***Diesel Generator Sales, Hire, Service,
Spares, Refurbishment & Maintenance***

Reconditioned Generator Sets from Yorpower

Users of refurbished generating sets demand the same high standards that they would expect from a new set.

Yorpower's Refurbishment Division, with experience as the biggest reconditioning supplier in Britain, enables us to ensure these high standards are met consistently. Each of our reconditioned sets follows a six stage process as described below.

1 – Selection

The first step in ensuring refurbished generators will meet customer expectations is to select good quality equipment. We therefore review an engine's history and maintenance regime before we purchase or accept it as part exchange. Typically we only accept machines with a demonstrable Maintenance history and low hours.

2 – Initial Load Test

Yorpower have load banks enabling us to test generators upto 1750kVA at our facilities. Each machine is load tested up to 100% capacity to enable our engineers to diagnose any potential shortfalls with the generator.

3 – Repairs and Upgrade

After the initial load testing results, necessary rectification is performed to ensure reliable operation. Units may also be modified and upgraded to meet specific customer requirements. This typically includes adding modern control systems (see picture), remote start and acoustic enclosures. Consumables such as filters, belts and hoses are also replaced at this stage.

4 – Cleaning and Painting

All units are professionally degreased and re-sprayed with anti corrosion primer and given a gloss paint finish that is both aesthetic and durable.

5 – Final Load Test

The units are tested on load for a minimum of one hour and with staged loads up to 100%. During test, both the engine and alternator are monitored for speed and voltage characteristics to ensure the pre-requisite demands are met. Shutdown protection is also tested, and a test certificate is produced.

6 – Packing

All units despatched from Yorpower, whether by lorry or in container, are covered with a plastic wrapping to ensure that the customer receives the generator in the high quality condition it was despatched.

Why Purchase a Refurbished Generator from Yorpower?

There are numerous benefits in purchasing a refurbished generator set from Yorpower:

EXPERIENCE – With over 15 years experience, we are the largest supplier of refurbished sets in the United Kingdom. Moreover, we also supply and maintain new generator sets, so our engineering and refurbishment capability is second to none.

QUALITY – Our rigorous selection, testing, and refurbishment process ensures that only machines of the highest quality are supplied by our refurbishment division.

PRICE – Many customers require generator sets but often find the cost of a new set prohibitive. Refurbished sets bring the benefits of similar levels of quality but with prices typically less than 50% of the equivalent new machine.

ISO9001 – All divisions of Yorpower, including the refurbished generator set division, are accredited to ISO9001:2000. Our customers therefore benefit from the assurance that our processes are approved and rigorously adhered to.

Our customer reference list is extensive; we have supplied generator sets to over 25 countries worldwide, and many of our customers have previously purchased generators from us. We also provide full after-market support for our sets – maintenance contracts are available and we can provide competitively-priced spare parts for all generator sets we supply.

Certificate No: FM 36735

Yorpower Manufacturing Ltd is the only refurbished generating set specialist in the United Kingdom to have ISO9001:2000 approval by the British Standards Institute.
